

Generative AI

Generative AI is the latest disruptive technology taking the world by storm—with its ability to create and generate content, images, and even entire virtual worlds, Generative AI has opened up new frontiers and possibilities previously unimaginable. This technology, driven by Deep Learning and Neural Networks, has the potential to transform industries, enhance creativity, and reshape human interaction in profound ways.

With technology gradually seeping into various facets of our life, FutureSkills Prime has created a [Generative AI](#) channel, a one-stop shop for learners to stay abreast of the latest developments, and build their skills and expertise in this domain to stay on top of the game. This channel hosts free digital fluency Pathways and courses and is updated regularly.

While Generative AI gains traction across the world, its understanding and use will vary by age group, industry, job roles, and other factors. It might suffice for some to just know how to use these tools in their day-to-day life and work, but core technical roles will require an in-depth understanding of and expertise in this technology.

Consequently, the generative AI content on the platform has been designed and categorized taking these factors into consideration:

Generative AI Content on FutureSkills PRIME

Types of Generative AI content on FutureSkills Prime

AI Fluency: This includes 30-minute free Pathways to help learners obtain a holistic picture of generative AI, its benefits and concerns, real-world applications, and ethical considerations. The link to access this pathway is <https://learn.futureskillsprime.in/channel/generative-ai/4460>

Generative AI Pathways: These 30-minute free modules cover topics such as Prompt Engineering, DeepDream, Alphacode, Perplexity AI, etc. Learners earn a badge on successfully completing the Pathway. This content will provide an understanding on Gen AI and how to improve productivity using Gen AI. Currently, there are 48 pathways that can be consumed by all learners. The link to access these pathways is <https://learn.futureskillsprime.in/channel/generative-ai/3948>

Courses: Competency-based courses are targeted to upskill you for in emerging technologies. The courses include theory and practical hands-on application. These courses are aligned to industry-recommended and government-approved Competency standards. These include courses such as Google Cloud Generative AI, ChatGPT Expert, etc. The courses help in a deeper understanding of Generative AI. The link to access the course is <https://learn.futureskillsprime.in/channel/generative-ai/3987>
