LIBRARIES THAT CAN BE USED:

@mustajab-ali

PyCoin

A library that provides tools for working with Bitcoin and other cryptocurrencies. It includes functions for creating and validating transactions, generating and managing private keys, and more.

@mustajab-ali

BlockCipher

A Python client for the BlockCypher API, which provides a variety of blockchain-related services, including transaction processing and block explorers.

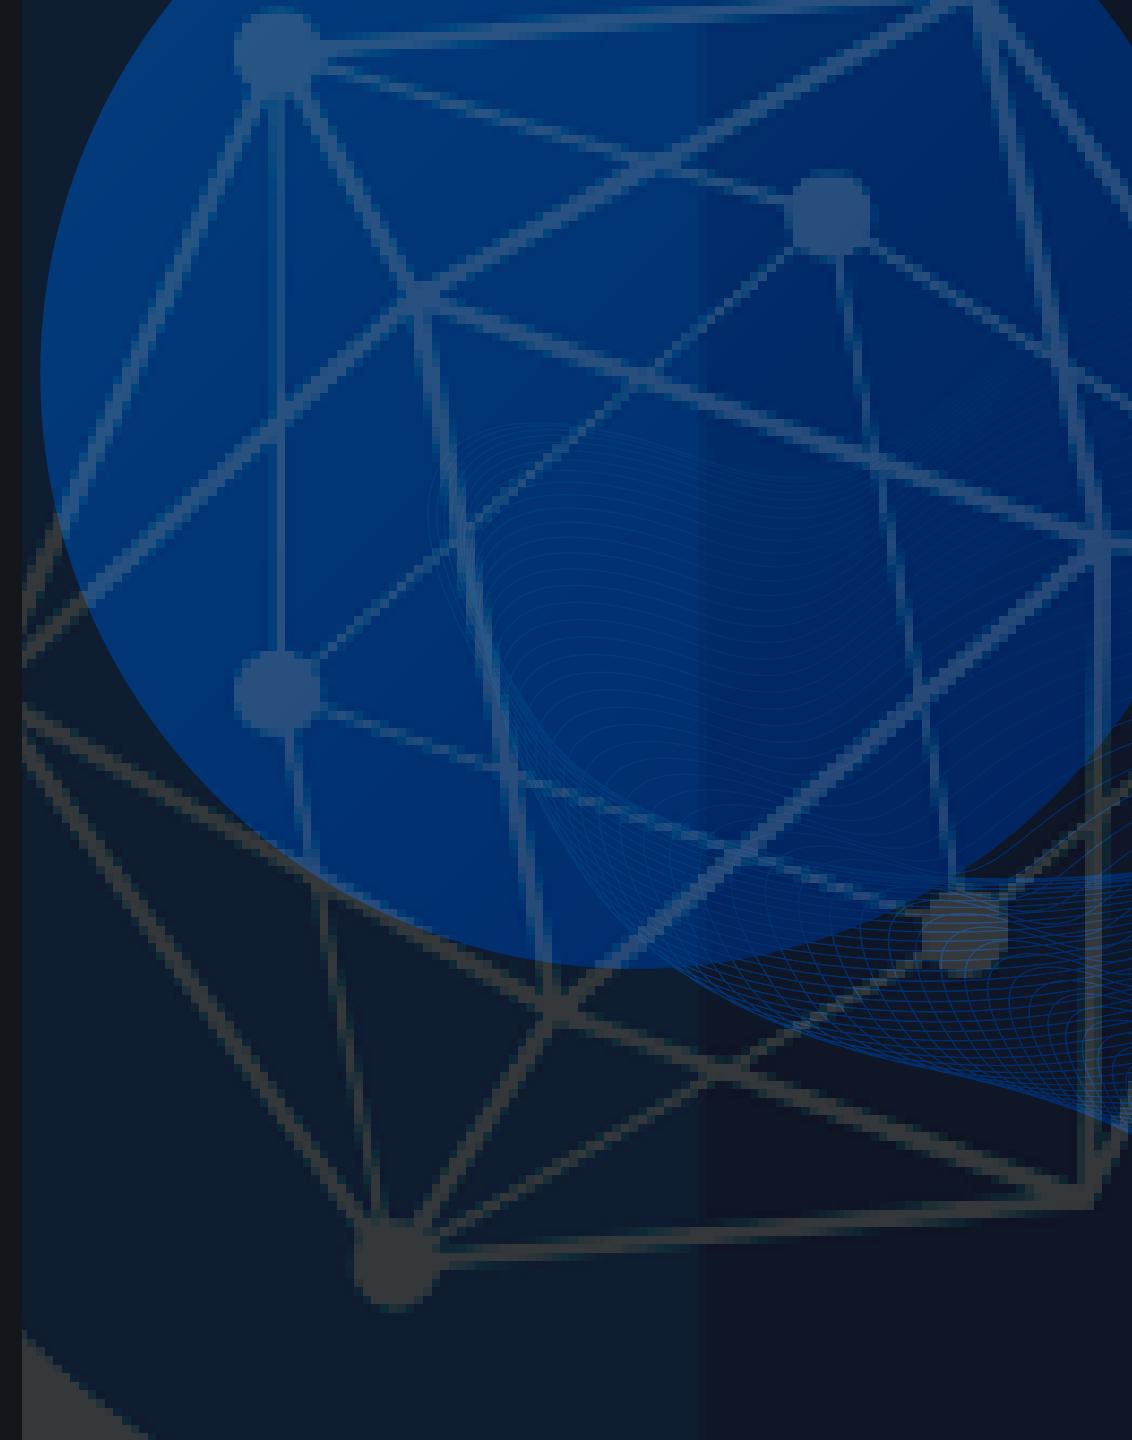

@mustajab-ali

Hyperledger Fabric SDK

A Python implementation of the Hyperledger Fabric blockchain platform. It provides APIs for interacting with the Fabric network, including creating and querying channels, submitting transactions, and more.

@mustajab-ali

Ethereum

A Python library for interacting with the Ethereum blockchain. It includes functions for creating and sending transactions, deploying and interacting with smart contracts, and more.
